This intriguing 20-article volume edited by Kathleen Cahalan, Edward Foley, and Gordon Mikoski explores the question of integration in theological education. The editors, who also author multiple articles in this book, divide this text into four sections – schools, curriculums, courses, and frameworks – to engage integration. The authors represent a variety of disciplines in theological education including: practical theology, worship, Christian education, spirituality, ministry, leadership, and church history. In the introduction, Stephen Graham explains, “this book takes a very broad view of integration, using the term in three ways: making connections between bodies of knowledge, overcoming the divide between theory and practice, and enhancing what is called the ‘professional’ model by integrating intellectual, practical, and moral and professional aspects of theological education” (ix). Cahalan frames this volume with a very personal and robust essay. She writes, “I fear we have left it to the students to connect the dots between study, call, and ministry...the lack of integration in theological education and ministerial practice comes at a high price. It reverberates through the personal, ecclesial, and systemic messes we see every day in the church” (2). She then frames this book with various approaches to integration including: the split between theory and practice, divisions between various branches of theological study, and the integration between the intellectual, practical, and moral/professional domains. In the first section on schools, the authors consider integration across the wider school communities. Foley opens this section by examining the school as an agent in the integrating process. He broadens the concept of school to include formal, informal, and semi-formal education. After chapters on faculty development and renewal processes, Foley returns to provide a case study from Catholic Theological Union and an additional article to sum up this section. He concludes that “these are challenging times, but these challenges are also gifts, and they would be a terrible thing to waste” (71). The second section, on curriculums, addresses the opportunities and

problems in the area of integration in theological programs of study. Cahalan begins by exploring the dynamics of seminary curriculum around the concept of integration. She argues that “if faculty want education to be more integrative, they have to do more than rearrange the courses and credits and defend their turf” (75). Then she outlines principles of curricular design to produce integrated learning. Her themes are continued in articles by David Rylaarsdam, who explores overhauling curriculum, Jeffery Jones, who gives special attention to the relationship between field education and the rest of the curriculum, and David Jenkins, who adds the needs of denominations to the mix of curricula drivers. The third section explores integration with courses. Mikoski starts breaking integration down to the course level including engaging the explicit, implicit, and null curriculum. After three well-developed case studies, Jeffery Tribble adds the concept of racial differences and Foley adds the challenge of online classes to the discussion on integration. Finally, in the last section, the three editors engage integration through three lenses: “as models, as practical wisdom, and as theology” (14). All three provide engaging conclusions that should propel readers to action. Although the target audience for this book is theological educators and administrators, this book offers important fodder for independent theologians and leaders of religious communities to consider. In addition to being well-written and clear, a very difficult task for an edited volume, this text unpacks some very complex educational theories and theological issues in accessible non-jargon packed language. Although this text could have benefited by exploring the politics and challenges of change in light of its call for integration, it presents a well-rounded and very worthwhile read. The concept of integration will remain an important topic for faculty, administrators, and religious leaders for years to come, and this book provides a valuable contribution to the discussion.
